Understanding the workspace When you open Photoshop, you're greeted with the file browser, which is available in two forms: the standard file browser and the Quick Look preview window, shown in Figure 1-1. **Figure 1-1:** The file browser and Quick Look preview window are two means of accessing the workspace in Photoshop. The file browser allows you to open and save images, but in most cases, this isn't the case. The Quick Look window, which is frequently the place to start working on an image, as well as to save images, works perfectly for that purpose. The Quick Look window, shown in Figure 1-1, is used to preview your image before and after editing. It's also the place to start editing an image in Photoshop. You can use

Q: how to move files within an apk file I am having a problem with some files i should move into the apk package. First, i created a file called "media/" and included it within the assets/ folder, then i created another folder and included that folder in the assets/ folder. My directory structure inside the APK is this: APK File | | |--res/ |--assets/ |--media/ |--ourfolder/ |--libs/ |--log/ |--otherfolder/ |--otherfolder2/ The problem is that the files i need to move are in the "otherfolder" and "otherfolder2". How can i move these files to the "assets/media/" folder? I tried unzipping and repackaging the APK using the terminal, but i get an error, which i will not post because i think it is an obvious error. A: Look at this: How to extract and move zip files from assets folder in android? Q: Big O complexity of the following code What is the Big O complexity of the following code, which would have sum values only if provided with values. def foo(numbers): result = 0 if(numbers == None): return result for num in numbers: result = result + num return result Would it be O(n)? as we are appending values to the result only if it is not already provided with values by the caller? A: No, it would be O(n**2) - you're running a loop from O(n) to O(n). Python's docs describe the worst case complexity, as there is no way to tell what the input size is going to be. Laser-induced fluorescence studies of molecular interactions in liquid-crystalline and polycrystalline materials. In this paper we report on two laser-induced fluorescence (LIF) investigations on various systems. First, we have successfully recorded LIF spectra of monocrystals of three pairs of crystallographic polymorphs of 2-ethylhexyl 4-bromobenzoate (EHB) and three pairs of liquid crystalline mesophases; as well as, on crystalline sample of EHB doped with tetraacrylate monomer. Additionally, to study the influence of polycrystalline nature on the optical properties we have carried out time-resolved LIF measurements on polycrystalline samples of EHB with and without azobisisobutyronitrile (AIBN) initiator. In all cases a very good agreement was obtained between the experimental and the theoretically predicted LIF spectra. Theoretical calculations of the LIF spectra were performed for the binary and ternary systems, as well as for the binary and ternary mixture. The LIF spectra were explained by molecular orientations induced by the molecular interactions. Basic science: adhesive glycocalyx formation and adhesion. The glycocalyx is a ubiquitous layer of proteoglycans, glycoproteins, and other complex carbohydrates attached to the plasma membrane of most adherent cells. The underlying extracellular matrix serves as a scaffold that transmits mechanical and biochemical signals to the cell. Interactions among these extracellular and intracellular components of the glycocalyx and matrix influence numerous cellular functions and are implicated in pathological conditions such as cancer and infection. The newly discovered role of the glycocalyx as a regulator of matrix-cell interactions has shed new light on its complex composition and makes it an intriguing topic for basic science. I have a little example of what I'm trying to do: public class Type { public string Name { get; set; } } public class Class { public string TypeName { get; set; } public string MethodName { get; set; } }
